

Executive Summary of an Audited LDBC Benchmark Result

Linked Data Benchmark Council – Social Network Benchmark – Interactive Workload

System Details

Test Sponsor	System Under Test	System Availability Date	Benchmark Specification
Createlink 创邻科技	 GALAXYBASE	April 02, 2025	LDBC SNB 0.3.6

Cloud provider	Machine region / instance type	Operating system	Database management system
Amazon Web Services	US-West-2 / x8aedz.metal-24xl	Ubuntu Linux 26.04	Galaxybase v3.5.3

Server processor cores / threads / type	Total cache size per CPU	Memory size	Storage / file system / average performance
96 / 96 / AMD EPYC 9R05	L1i cache: 1.5MiB L1d cache: 2.25MiB L2 cache: 48MiB L3 cache: 256MiB	3 TiB	3.5TiB NVMe SSD / xfs file system/ 60,802 IOPS

System Pricing

Total system cost	Machine cost	License cost	Maintenance fee
483,909 USD	272,837 USD	155,200 USD	55,872 USD

Benchmark Configuration and System Settings

Datagen version	v1.0.0		
Driver version	v1.2.0		
Implementations version	v1.0.0		
Driver read threads	96 (SF100/SF300), 64 (SF1000)		
Driver write threads	96 (SF100/SF300), 64 (SF1000)		
Output format	CsvComposite using the StringDateFormatter		
Scale factor	100	300	1000
Time compression ratio	0.00100	0.00305	0.02150
Transaction isolation level	Serializable		

Summary of Performance Metrics

Scale factor	Benchmark duration	Benchmark operations	Throughput (ops/s)	On-time query compliance
100	02h 03m 56.423s	1,029,999,274	138,507.35	98.92%
300	02h 03m 15.937s	1,090,027,736	147,381.97	99.13%
1000	02h 01m 17.610s	984,914,443	135,334.88	100.00%

Audited by Márton Búr	Report Date: 2026-09-30
This summary references an audited LDBC benchmark run. The results have been gathered by an independent and impartial auditor who has validated the implementation of the queries, successfully run the ACID tests associated with the claimed isolation level, and verified the overall system's configuration conformance to the description of the benchmark and its strict requirements.
